Collaborative Opportunities with spark

UCAR science education

explore • inspire • engage
Spark engages students and educators of all ages to help develop the next generation of innovative scientists.
Spark’s mission is to help the public understand, value, and use research in the atmospheric and related sciences.

Our team can help you leverage your science to design engaging activities for K-12 students, effective internships for college students, and exhibits that attract and inform members of the general public. We can connect you to diverse communities and a national network of science educators.

Our science educators can help you design and deliver a compelling customized science education and engagement program for a variety of audiences, from the kindergarten classroom wondering how clouds are formed to the graduate students who wants to bring information about climate and health to their community.
